

CHEMIGATION SYSTEMS INTERNATIONAL

True PROPORTIONAL Fertilizer Injection

Fertigation for Variable Flow Irrigation Systems

The right control system

Easy fertigation set-up. Easy operation and monitoring. The built-in computer control system lets you set the injection ratio. The system has a digital display that shows key system variables such as:

- Water flow
- Required injection ratio
- Required injection rate
- Current injection rate

Best of all...

True feedback flow control constantly monitors and calibrates the injection rate.

The right optional equipment

CSI offers a multitude of options:

- Fertilizer tanks
- Containment
- Pre-piped systems
- Reporting

These options can be included in complete prefab systems that require only minimal final connections to your irrigation and electrical systems.

The right capacity for the job

What injection rate do you need? CSI builds injectors in sizes covering the full range of required fertilizer and chemical injection flows...including the industry's biggest and smallest injectors.

The right price

CSI offers these effective, flexible, trouble-free systems at reasonable prices.

The right services

Customers often need assistance with site planning, contractor coordination, start-up, commissioning, operator training, and maintenance. All these services are available from CSI.

Annual service contracts are available.

The right pumping equipment

Pumped venturi injection: CSI's reliable, low maintenance pumped venturi does it all - accurate injection plus the built-in possibility of using the centrifugal pump for tank mixing and routine liquid transfers.

The right supplier

Chemigation Systems International: One of the world's best-known manufacturers of fertigation equipment now offers a genuinely superior fertigation system for golf courses and other projects requiring true proportional injection.
